Chapter 2:SQL

Practice Assignment Solution Template

Write a query and paste a screenshot of your output below the question.

1. Create a database named CompanyDB.
2. Create a table Employees with the following columns:

   Employees (EmpID (Integer, Primary Key), EmpName, Salary, JoinDate)

3. Create a table Departments with:

   Departments (DeptID (Integer, Primary Key), DeptName)

4. Add a column Email (VARCHAR(100)) to the Employees table.
5. Add a column dept_location to the Departments table.
6. Add a NOT NULL Constraint to the Phone column
7. Change the size of the EmpName column from VARCHAR (50) to VARCHAR (100).
8. Drop the primary key Constraint from Departments
9. Create a foreign key constraint between two tables
10. Rename the column EmpName to EmployeeName.
11. Apply a CHECK constraint on the Age and Salary columns.
12. Remove the Phone column from the Employees table.
13. Rename the table Employees to EmployeeDetails.
14. Drop the CHECK constraints.
15. Delete the Departments table permanently.
16. Drop the database.

Name :– Pravin Pandurang Nangare

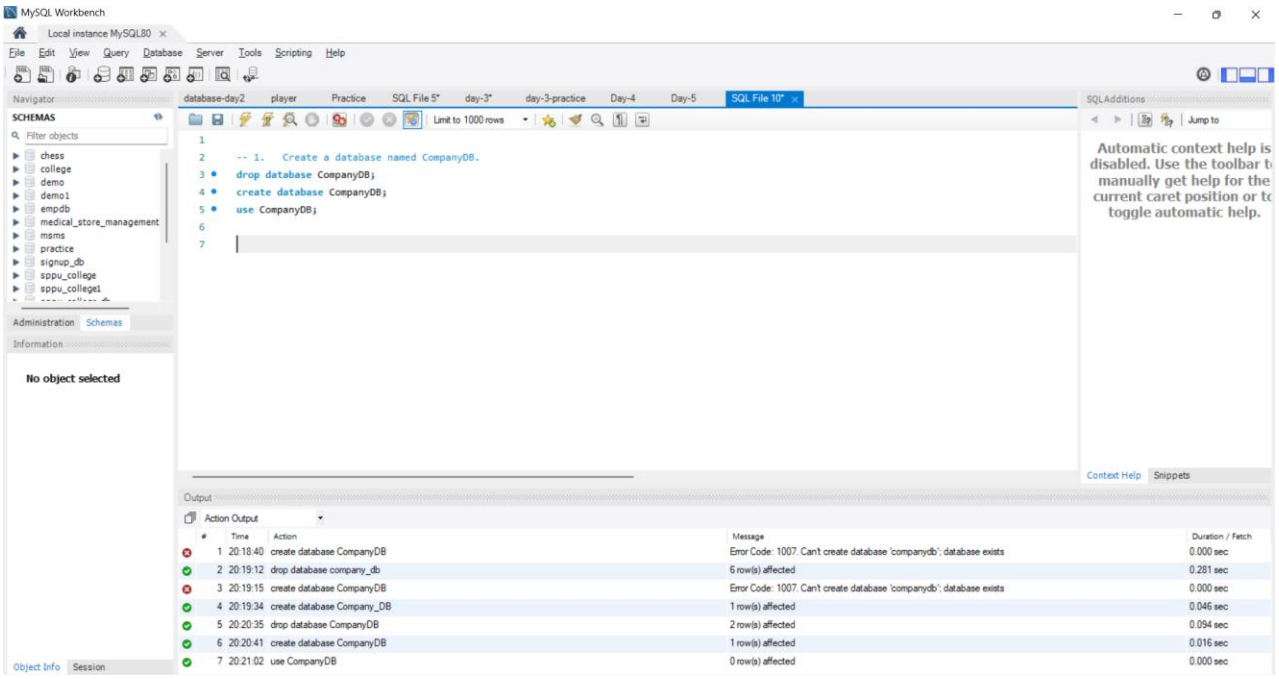

Roll. No :- 2601126

1. Create a database named CompanyDB.

drop database CompanyDB;

create database CompanyDB;

use CompanyDB;

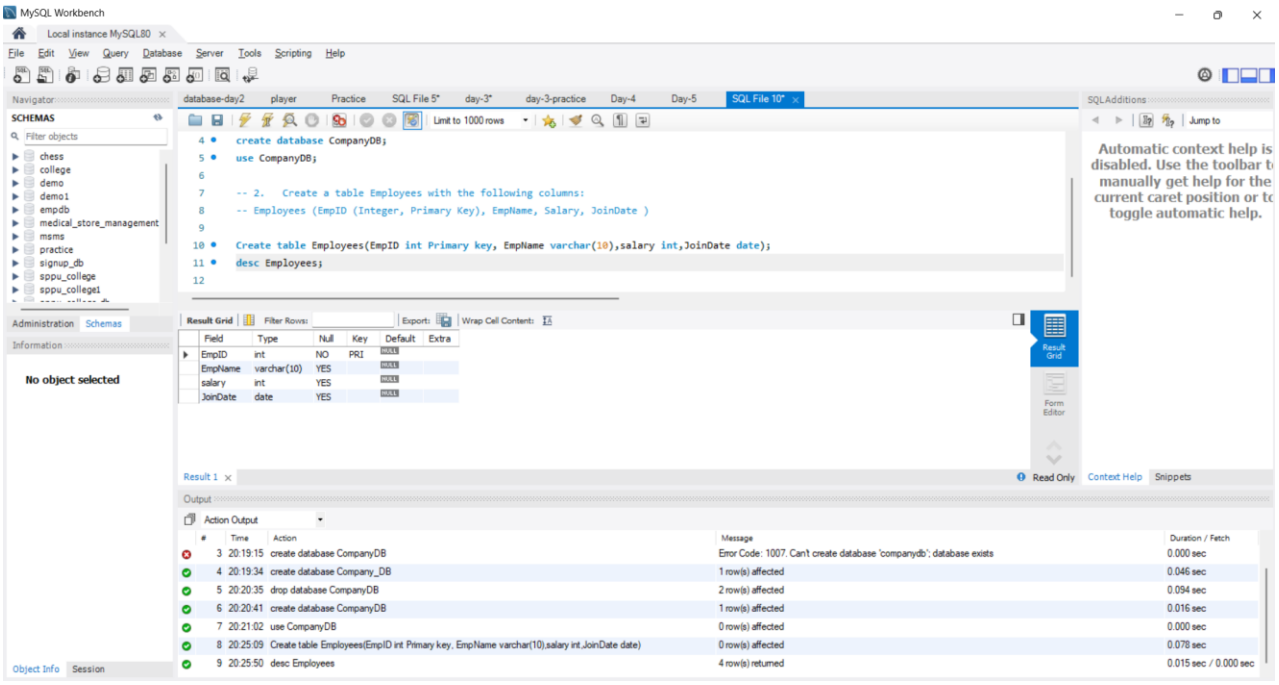

2. Create a table Employees with the following columns:

-- Employees (EmpID (Integer, Primary Key), EmpName, Salary, JoinDate)

Create table Employees(EmpID int Primary key, EmpName varchar(10),salary int,JoinDate date);

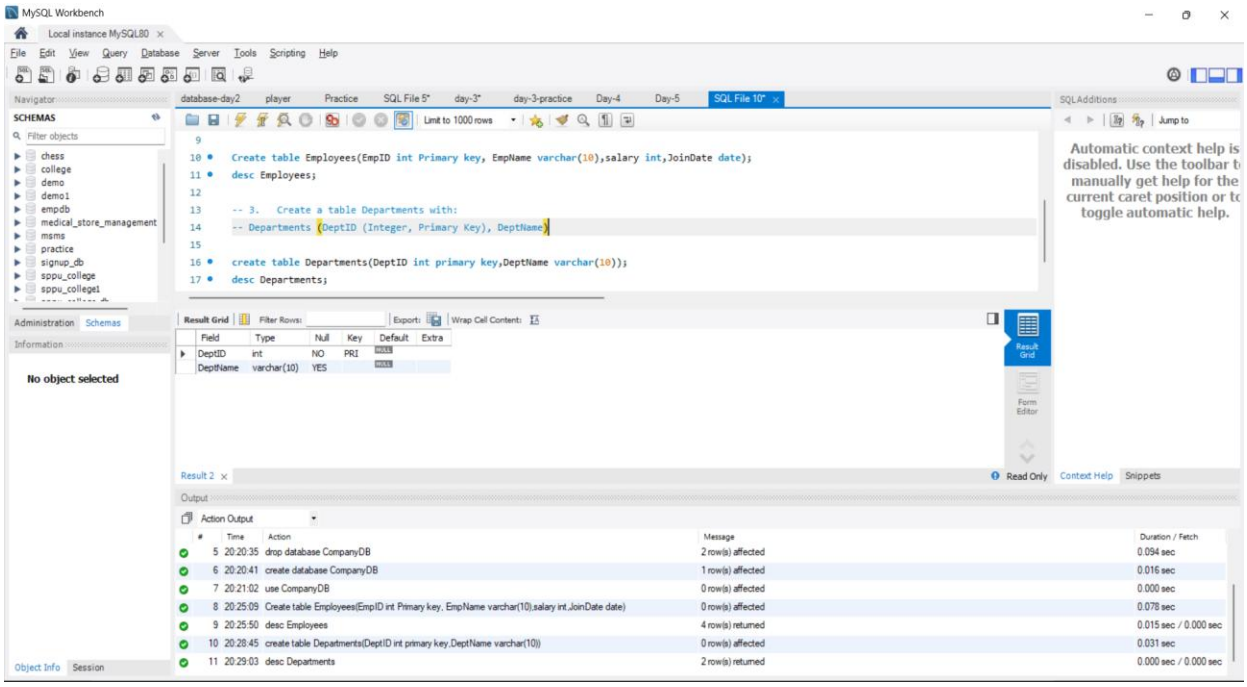

desc Employees;

3. Create a table Departments with:

-- Departments (DeptID (Integer, Primary Key), DeptName)

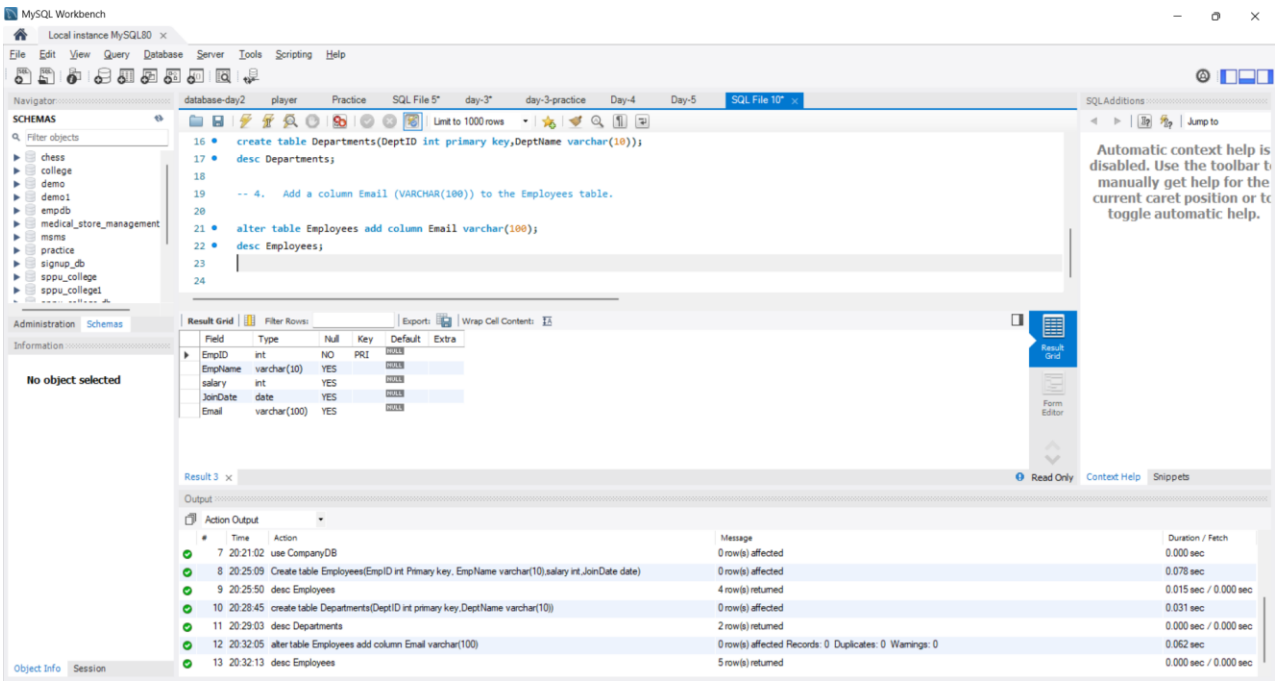

```
create table Departments(DeptID int primary key,DeptName varchar(10));
desc Departments;
```

4. Add a column Email (VARCHAR(100)) to the Employees table.

alter table Employees add column Email varchar(100);

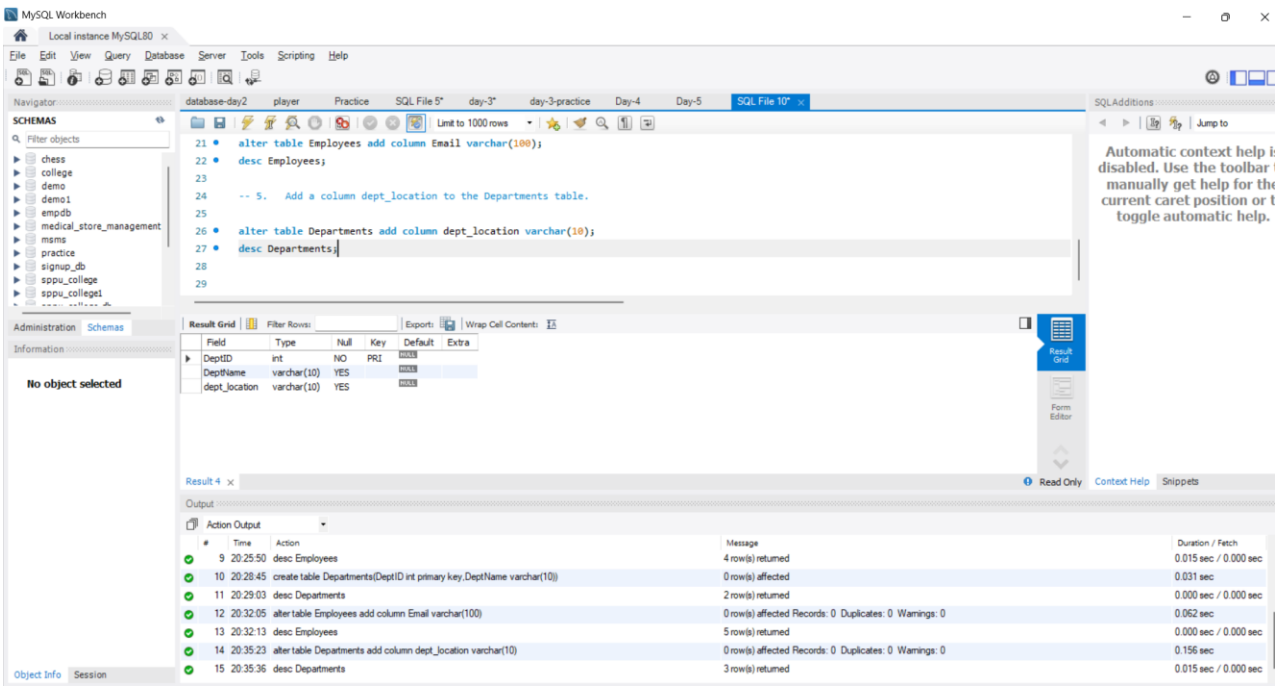

desc Employees;

5. Add a column dept_location to the Departments table.

alter table Departments add column dept_location varchar(10);

desc Departments;

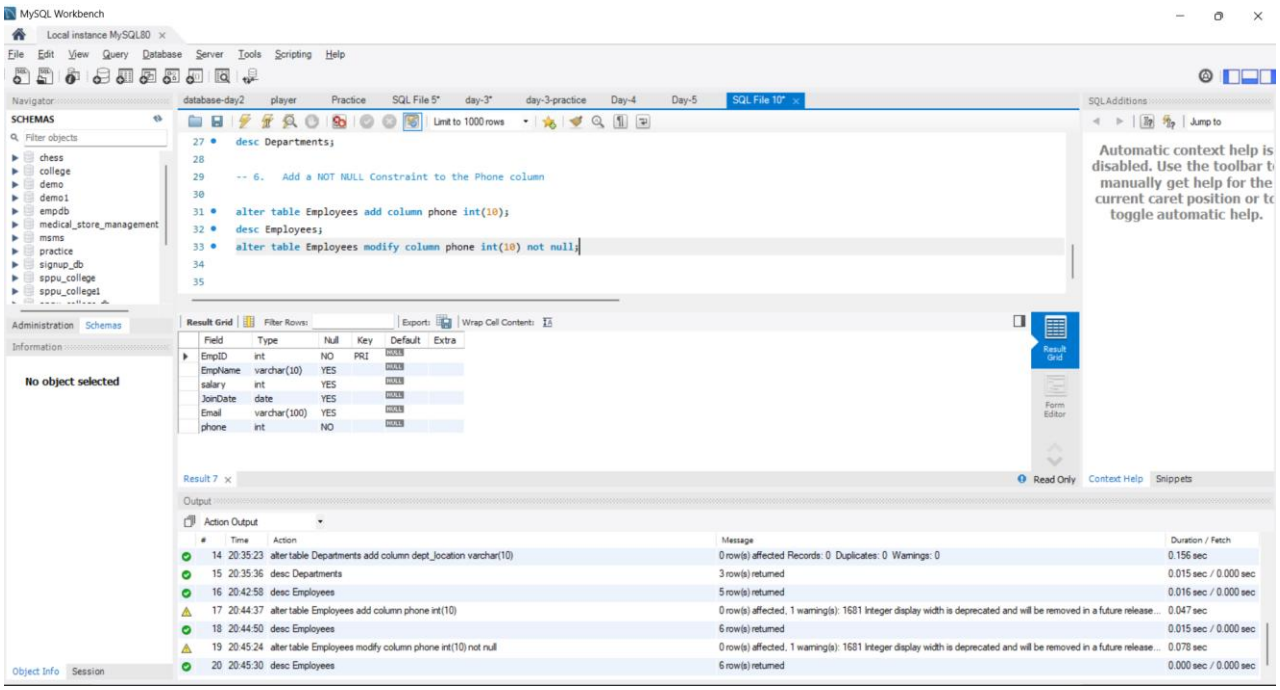

6. Add a NOT NULL Constraint to the Phone column

alter table Employees add column phone int(10);

desc Employees;

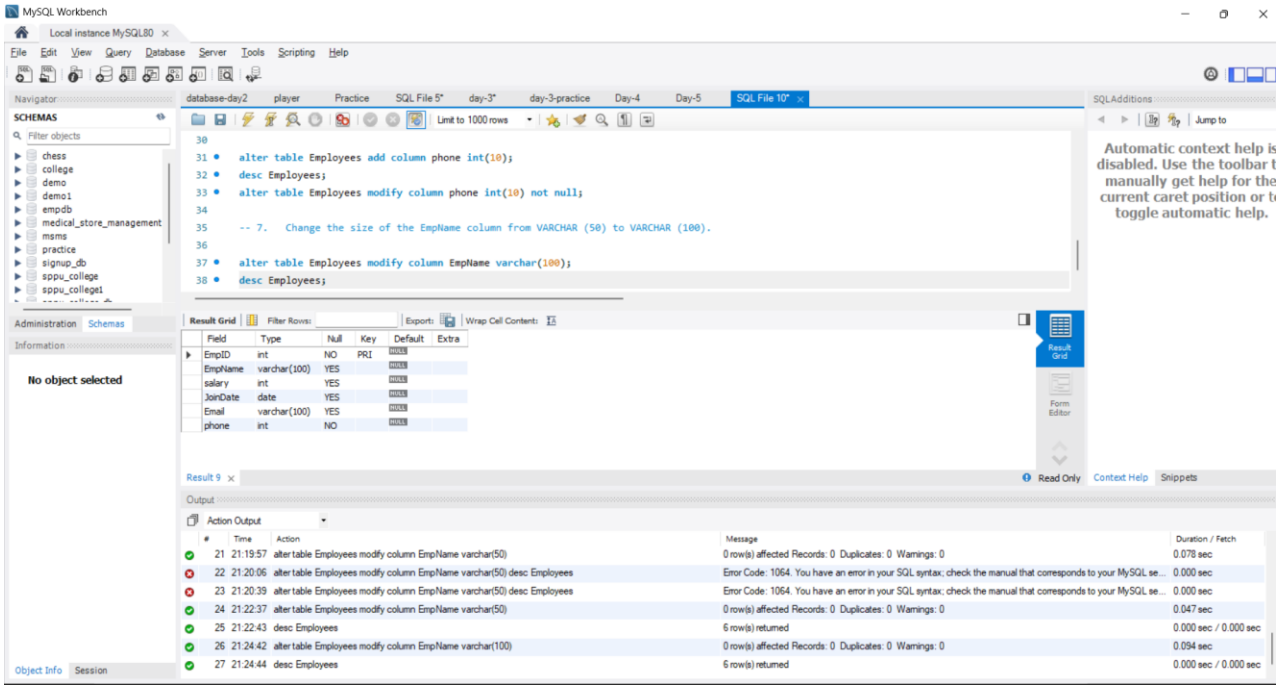

alter table Employees modify column phone int(10) not null;

7. Change the size of the EmpName column from VARCHAR (50) to VARCHAR (100).

alter table Employees modify column EmpName varchar(100);

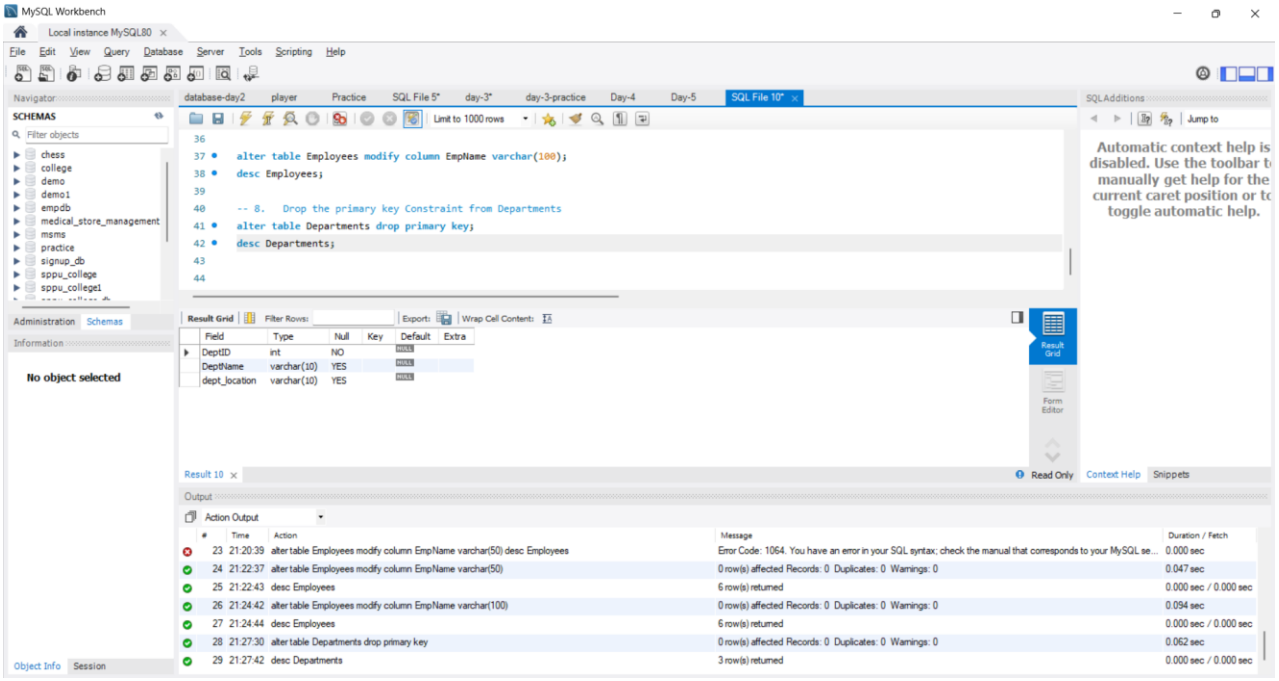

desc Employees;

8. Drop the primary key Constraint from Departments

alter table Departments drop primary key;

desc Departments;

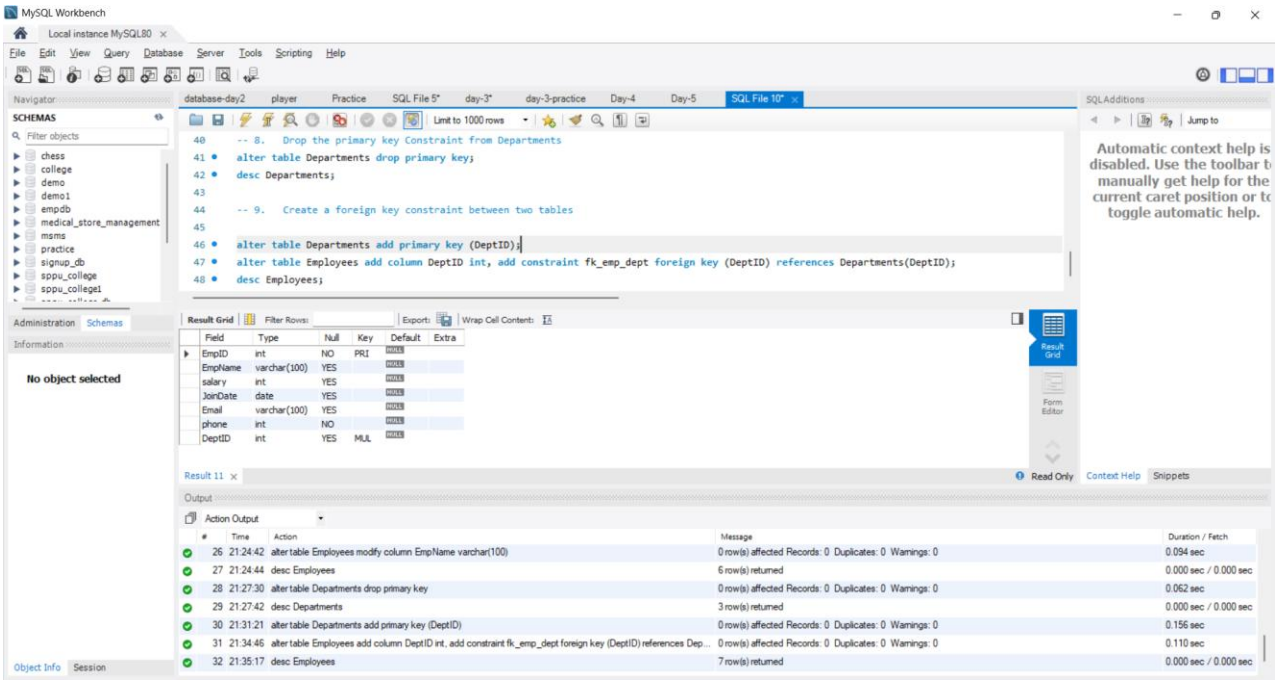

9. Create a foreign key constraint between two tables

alter table Departments add primary key (DeptID);

alter table Employees add column DeptID int, add constraint fk_emp_dept foreign key (DeptID) references Departments(DeptID);

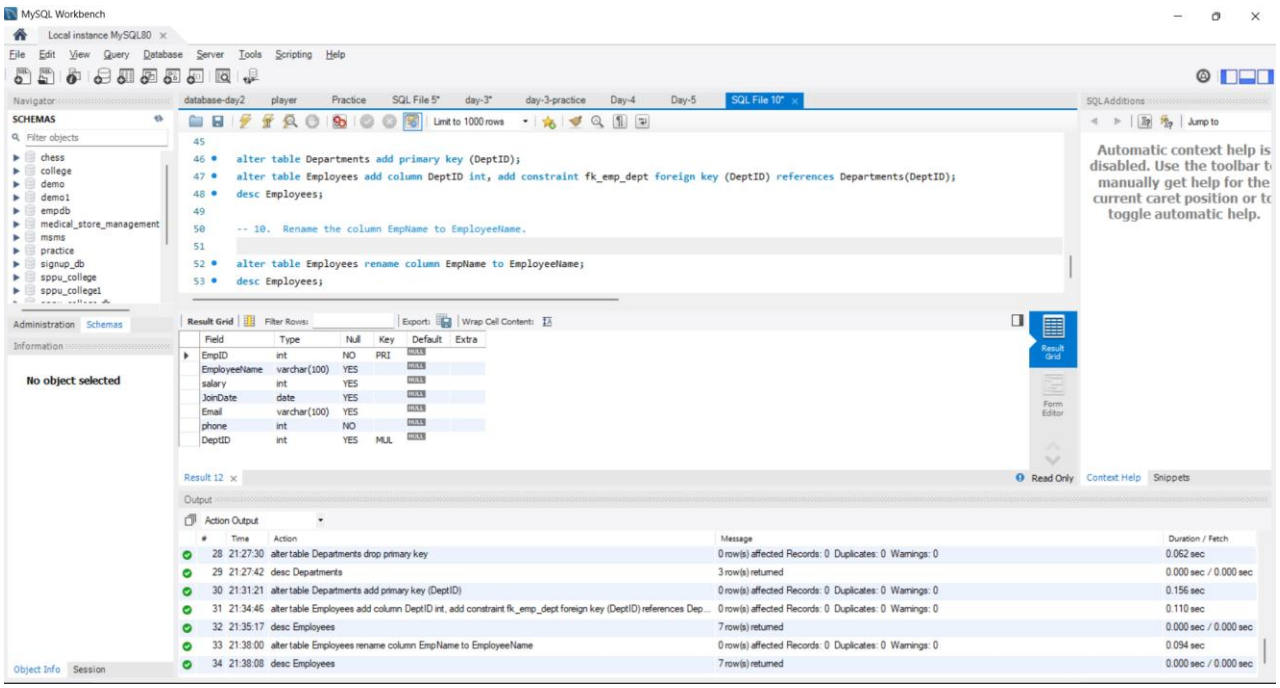

desc Employees;

10. Rename the column EmpName to EmployeeName.

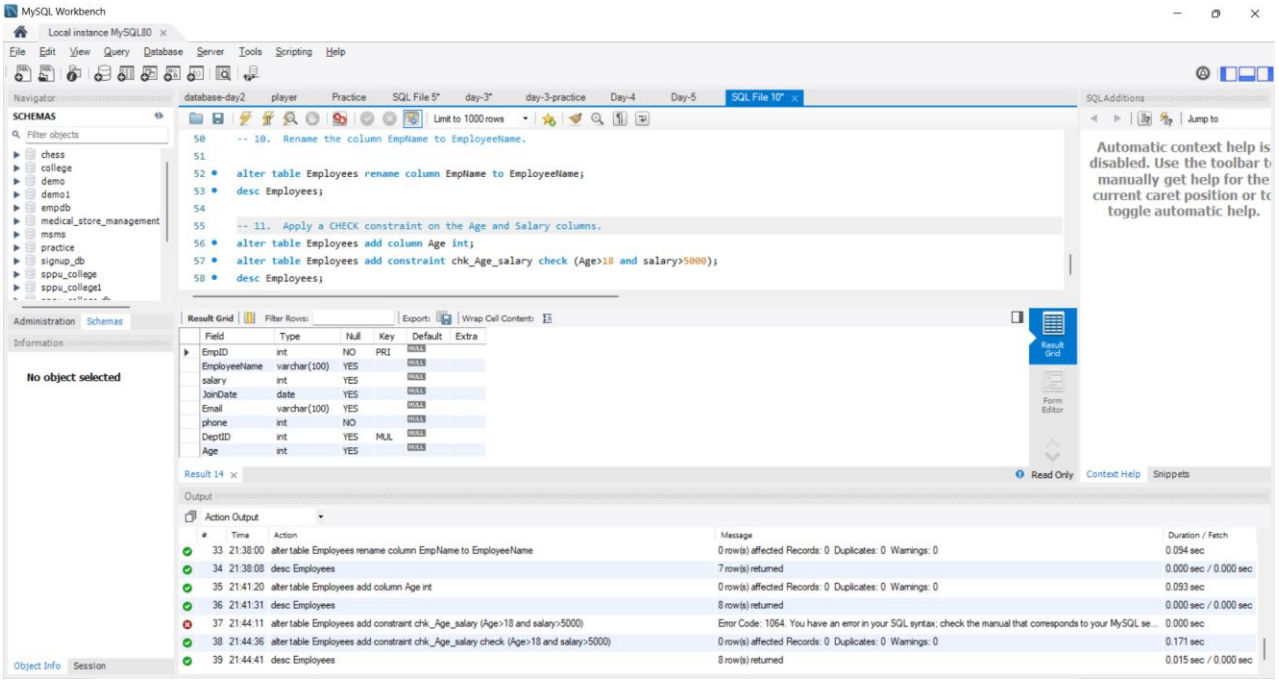

alter table Employees rename column EmpName to EmployeeName;

desc Employees;

11. Apply a CHECK constraint on the Age and Salary columns.

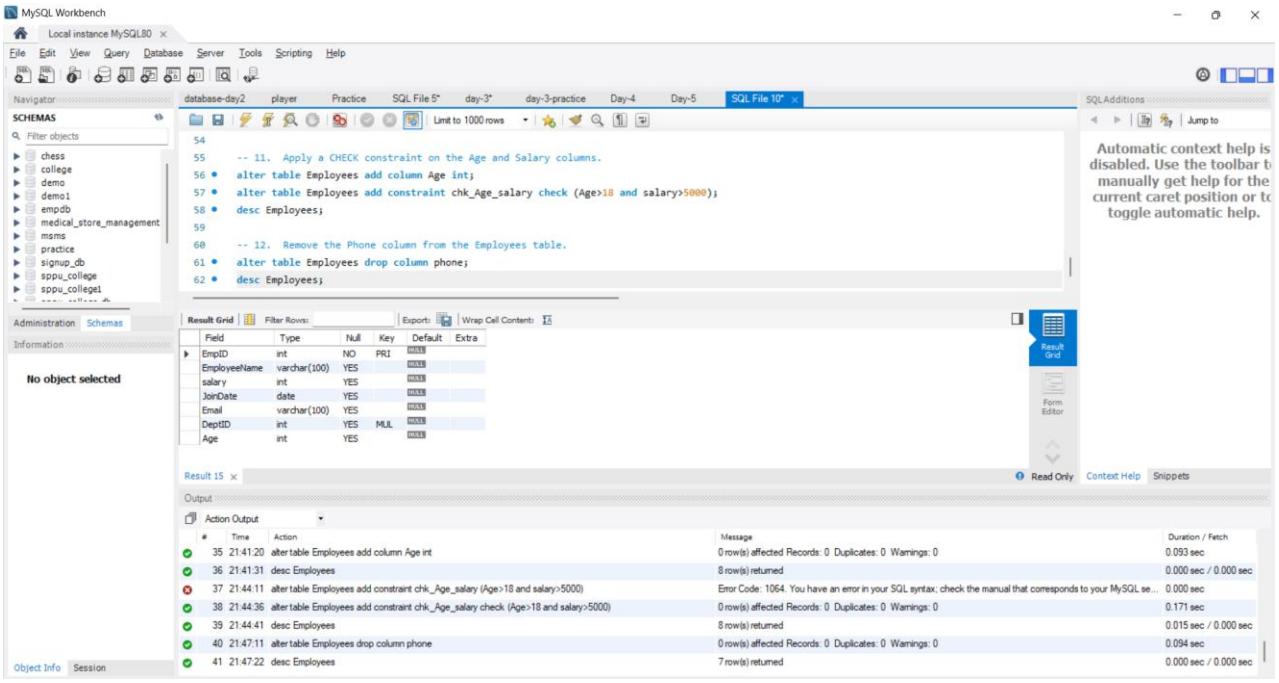

```
alter table Employees add column Age int;
alter table Employees add constraint chk_Age_salary check (Age>18 and salary>5000);
desc Employees;
```

12. Remove the Phone column from the Employees table.

alter table Employees drop column phone;

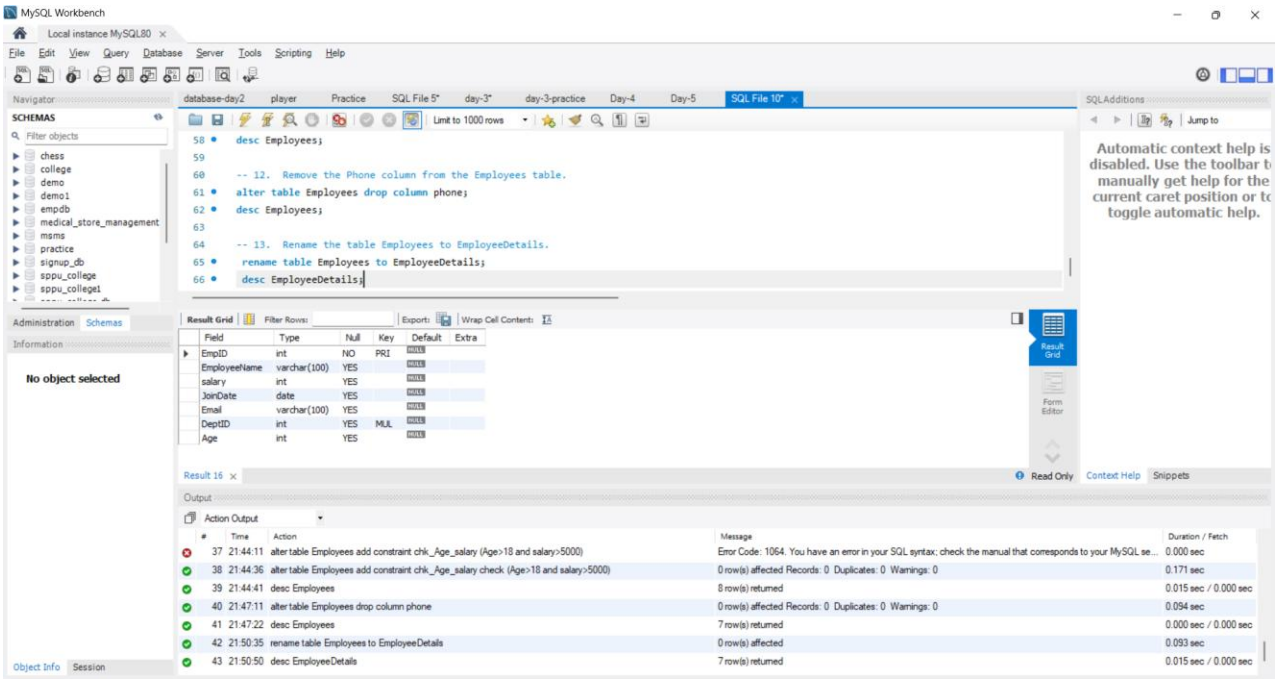

desc Employees;

13. Rename the table Employees to EmployeeDetails.

rename table Employees to EmployeeDetails;

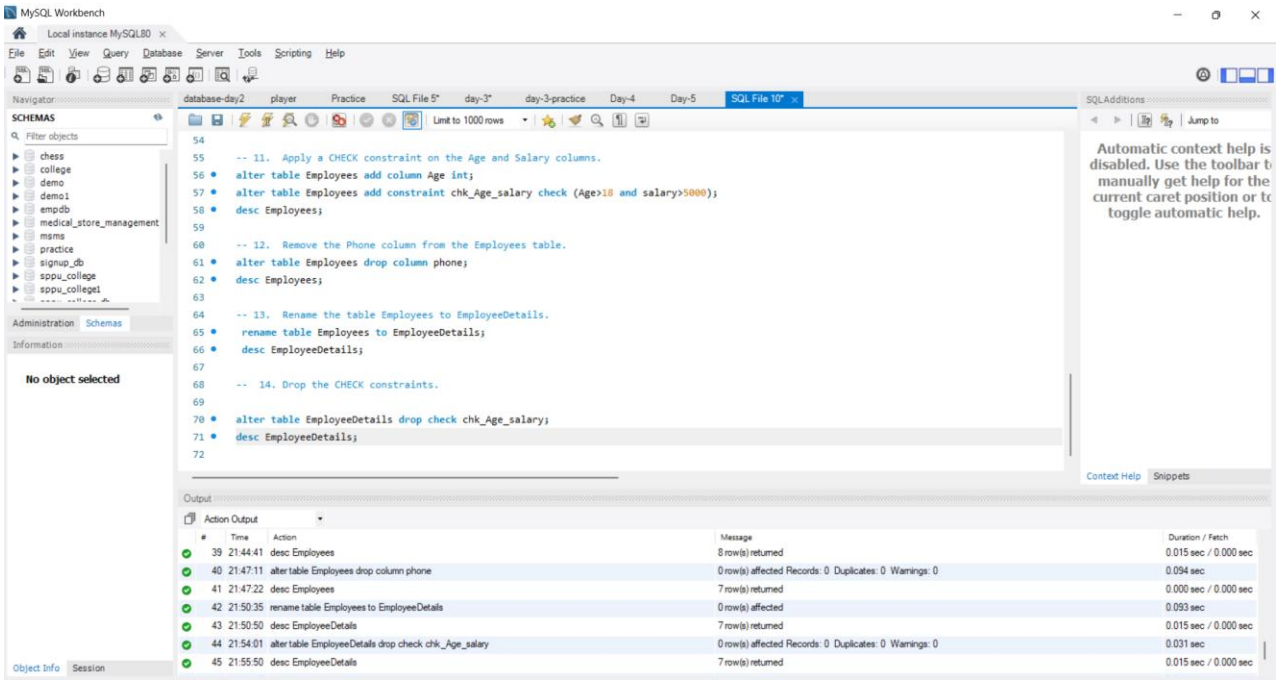

desc EmployeeDetails;

14. Drop the CHECK constraints.

alter table EmployeeDetails drop check chk_Age_salary;

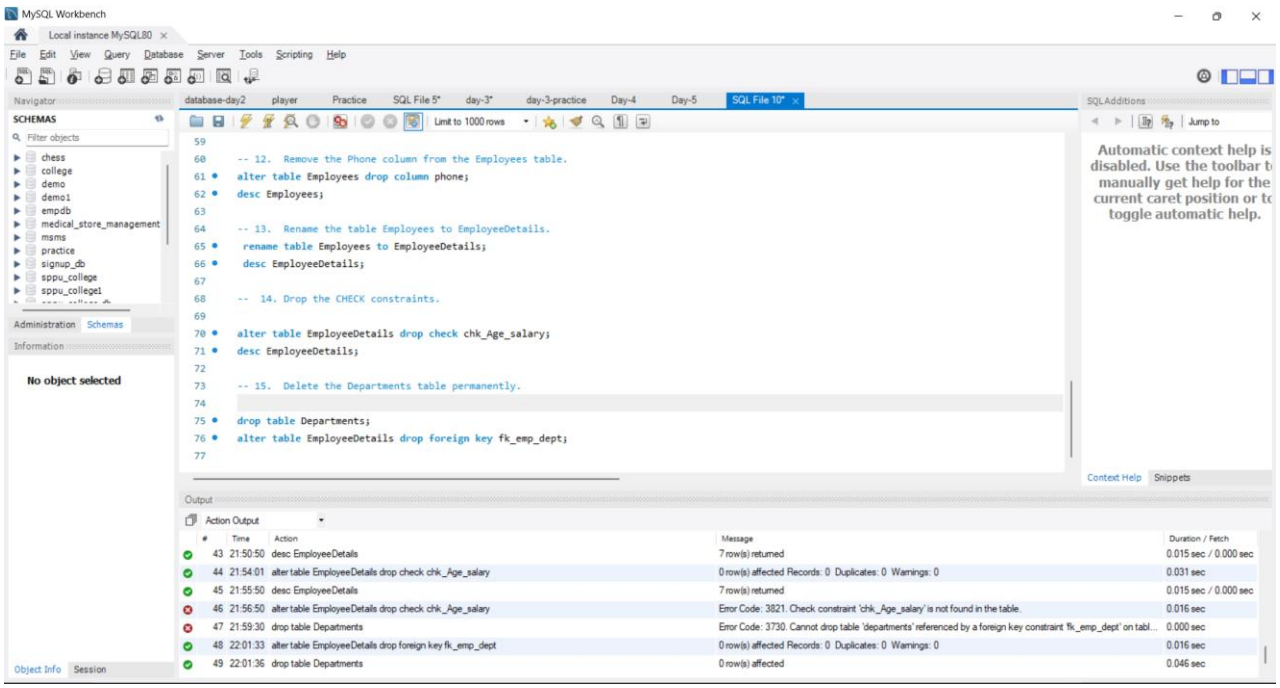

desc EmployeeDetails;

15. Delete the Departments table permanently.

drop table Departments;

alter table EmployeeDetails drop foreign key fk_emp_dept;

16. Drop the database.

drop database CompanyDB;
